Design input forms that validate data (e.g., email, phone number) and display error messages using HTML/CSS, JavaScript (with Validator.js)

AIM:

The aim is to design input forms that validate data, such as email and phone number, and display error messages using HTML/CSS and JavaScript with Validator.js.

PROCEDURE:

Step 1: Setting Up the HTML Form

Start by creating an HTML form with input fields for the email and phone number.

html
```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Form Validation</title>
    <link rel="stylesheet" href="style.css">
</head>
<body>
    <div class="container">
```

```html
    <form id="myForm">
        <label for="email">Email:</label>
        <input type="email" id="email" name="email" required>
        <span id="emailError" class="error"></span>

        <label for="phone">Phone Number:</label>
        <input type="text" id="phone" name="phone" required>
        <span id="phoneError" class="error"></span>

        <button type="submit">Submit</button>
    </form>
</div>
<script
src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.6.0/validator.min.js"></script>
    <script src="script.js"></script>
</body>
</html>
```

Step 2: Styling the Form with CSS

Next, add some basic styling to make the form look nice.

css

```css
/* style.css */
body {
    font-family: Arial, sans-serif;
    background-color: #f4f4f4;
    display: flex;
    justify-content: center;
    align-items: center;
```

```css
  height: 100vh;
  margin: 0;
}

.container {
  background-color: white;
  padding: 20px;
  border-radius: 5px;
  box-shadow: 0 0 10px rgba(0, 0, 0, 0.1);
}

form {
  display: flex;
  flex-direction: column;
}

label {
  margin-bottom: 5px;
}

input {
  margin-bottom: 10px;
  padding: 10px;
  border: 1px solid #ccc;
  border-radius: 3px;
}

button {
  padding: 10px;
```

```
    background-color: #28a745;

    color: white;

    border: none;

    border-radius: 3px;

    cursor: pointer;

}

button:hover {

    background-color: #218838;

}

.error {

    color: red;

    font-size: 0.875em;

}
```

Step 3: Adding JavaScript for Validation

Finally, add JavaScript to validate the input fields using Validator.js and display error messages.

javascript

```
/* script.js */
document.getElementById('myForm').addEventListener('submit', function (e) {
    e.preventDefault();

    let email = document.getElementById('email').value;
    let phone = document.getElementById('phone').value;
```

```
  let emailError = document.getElementById('emailError');
  let phoneError = document.getElementById('phoneError');

  // Clear previous error messages
  emailError.textContent = '';
  phoneError.textContent = '';

  // Validate email
  if (!validator.isEmail(email)) {
    emailError.textContent = 'Please enter a valid email address.';
  }

  // Validate phone number
  if (!validator.isMobilePhone(phone, 'any')) {
    phoneError.textContent = 'Please enter a valid phone number.';
  }

  // If no errors, submit the form (for demonstration purposes, we'll just log the values)
  if (validator.isEmail(email) && validator.isMobilePhone(phone, 'any')) {
    console.log('Email:', email);
    console.log('Phone:', phone);
  }
});
```

OUTPUT:

Email:

23071392@gmail.com

Phone Number:

hat

Please enter a valid phone number.

Submit

Email:

23071392gmail

! Please include an '@' in the email address. '23071392gmail' is missing an '@'.

~~9733030370~~

Submit

RESULT:

        Hence,to design input forms that validate data,such as email and phone number and display error messages using HTML/CSS and Javascript with validator.jss has been done successfully.
